

QCTEST SOFTWARE

Product Code: 26066

ViVITRO QCTest checks valve performance against user defined acceptance criteria. It is a turn-key, validated function test software system. The software is easy to use and can be paired with a specific Function Tester Load Assembly on the ViVITRO Pulse Duplicator, for quick valve change-outs. This combination is a ready-to-use solution for one of the most time-consuming aspects of production to validate.

The QCTest software system was developed as a quality control tool for QC performance testing (function testing) of cardiovascular devices such as heart valves. This production tool provides fast, reliable results at a fraction of the cost of designing and validating an in-house system.

> Features

- Pass or fail criteria definable using a secure log-in
- Automatically saves pass/fail results along with a report of each test and video
- User definable system calibration intervals
- Simple user interface
